

Decentralized Ownership of Space Assets

👤 *You don't have to be a billionaire to own a rocket* 🚀

Our Story

While building a national space program, the grandfather of our CEO and father of our Co-Founder created a theory about democratizing access to space.

The founders of Copernic Space are making that theory a reality after years of hands on experience and participation in space initiatives at Vandenberg Space Force Base. We realized that space needed a dramatic solution that empowered the industry to offer on-demand space assets and investments to the commercial market and general public.

Copernic Space is enabling countless organizations and individuals around the world to create and access tokenized space assets or investments. Today, we are working with leading companies and Web3 technologies to create the commercial and financial infrastructure for space.

About Copernic Space

Copernic Space is the web3 platform for companies and individuals to buy space assets and invest in the space economy of tomorrow, today.

Founded in 2020 by Grant and Eva Blaisdell, we are working directly with leading space companies to onboard their space assets and turn Copernic Space into the platform for space.

LEARN MORE

We apply blockchain to create the space asset market and unlock economic opportunities for space asset creators and investors.

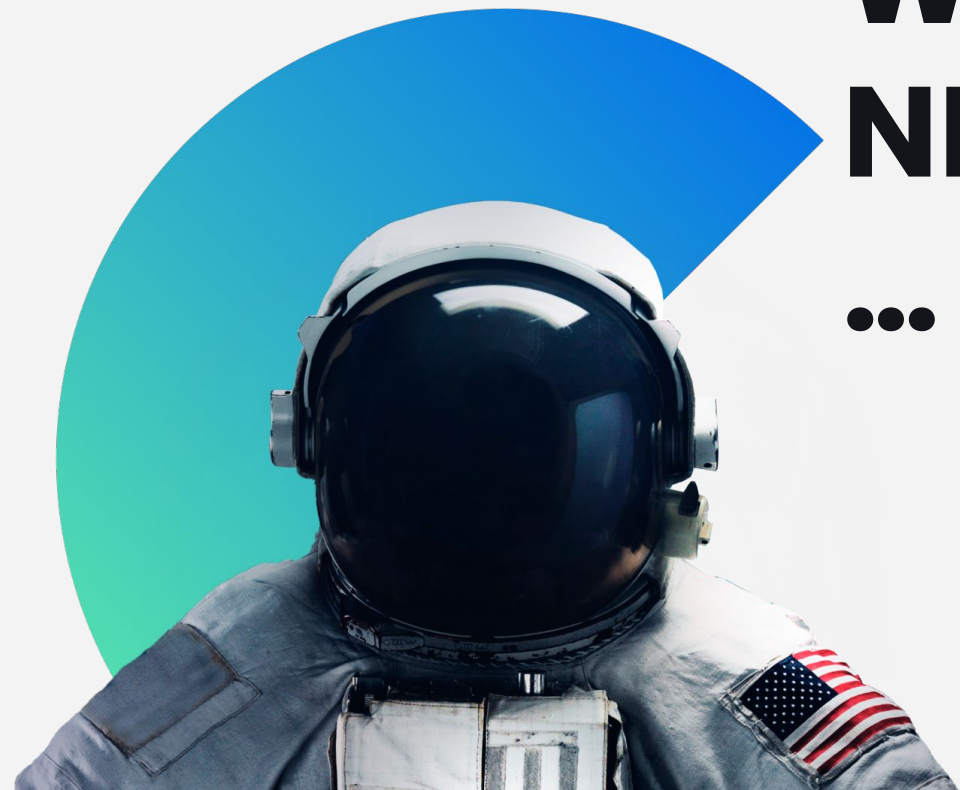

We enable space ventures to tokenize and fractionalize space assets, and create new revenue by accessing the wider commercial and investor markets.

We facilitate transactions between space and millions of companies, investors, and individuals wanting access.

We empower individuals, companies, and investors both big and small to have inclusion and ownership in space.

We are not an NFT project

100k

Companies want better access

Reported by [Australian Government](#)

“Not everybody can pay for suborbital flight, not everybody can afford a satellite image. With the approach that Copernic is taking, people will have access to these capabilities in ways that they’ve never had before, but that they will need in order to fuel the \$1 trillion to \$3 trillion space economy.”

SpaceMart

THE WEB3 MARKETPLACE FOR SPACE ASSETS(LAUNCH Q4)

Copernic Space's utility NFTs power the commercial market to create, acquire and trade space assets that generates an unprecedented flow of space revenues

- Tokenize and fractionalize space assets such as lunar payload or satellite data with attached utilities and rights
- List tokenized space assets for purchase on the marketplace
- Discover space assets and their utility on the marketplace
- Buy, utilize, or create your own assets based on purchased space assets
- Trade your space assets on our secondary market

WAITLIST

SpaceMart Launch

DEMOCRATIZING THE MOON

- The Moon is expected to be a \$1T economy by itself.
- In Q4 we will introduce the first ever availability of Moon assets and lunar cargo for individuals and the commercial market.
- Own physical and digital space on lunar landers through NFTs on Copernic Space.
- The acquired NFT gives you the right to place your physical or digital asset on the Moon.
- Your asset on the Moon can then be fractionalized and resold on Earth through our secondary market.

Climate Data**

ISS Payloads

Copernic Space not only represents a substantial step forward in making space accessible to everyone but will also help to unlock the full potential of this burgeoning sector.

~Julian Cyrus Co-Founder & COO of Lunar Outpost

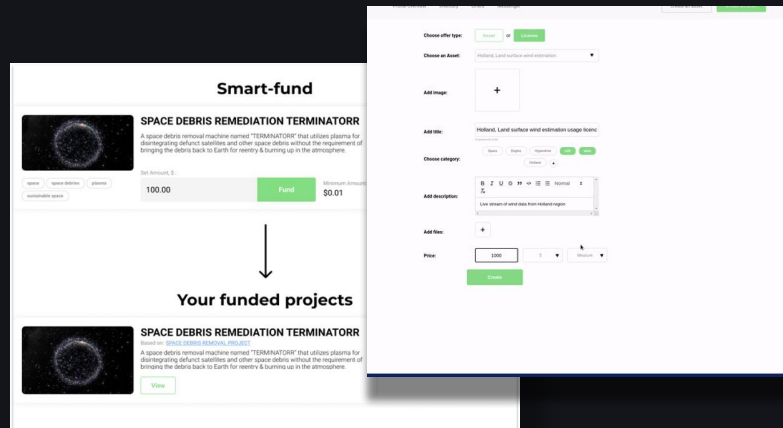

SpacePool

DEFI FOR SPACE (COMING Q4 2023)

A DeFi app with new investment models for space players that includes the public in financing space.

Using public token sales and crypto liquidity pools, we unleash a new scale of financing and capital for space ventures.

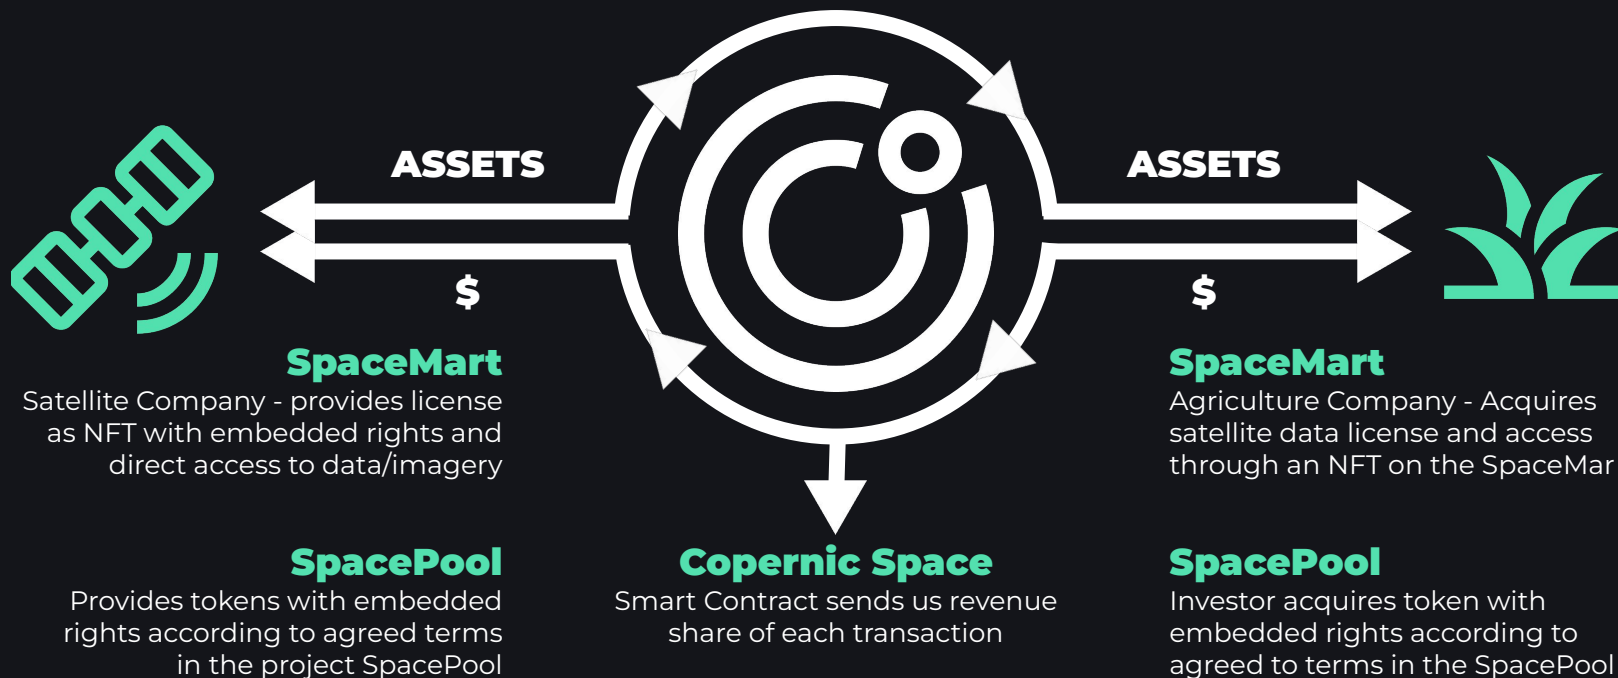

Business Model

We participate in every transaction on both our primary and secondary markets

Copernic Space Today

We're actively working with leading players to
bring space assets to market

- Seasoned team with track record and 3 years together
- Successfully raised \$325k from 3VCs + 2 angels in pre-seed
- Working product with initial revenue coming in
- Major commercial case launch planned for Q4
- Existing deal flow with space companies and commercial buyers
- Vibrant and growing community of interested individual buyers
- Raising \$1m seed round with \$250k committed

Leadership

Grant Blaisdell
Co-Founder & CEO

Grant began his first startup in Los Angeles at the age of 19 with a focus on digital media platforms and entered blockchain in 2013. In 2015 he Co-Founded a leading blockchain analytics and RegTech company Coinfirm, where as CMO Grant worked with the largest names in crypto and built the Coinfirm brand into a global name in its market.

With generations in space along with experience as a successful entrepreneur applying blockchain, Grant is creating the economic infrastructure for space and fulfilling his legacy to democratize access to it.

Leadership

Eva Blaisdell
aka Lady Rocket
Co-Founder

Eva Blaisdell is a US based tech, space, and media entrepreneur known as Lady Rocket. From Silicon Valley to Europe, she has decades of experience in tech entrepreneurship and executive positions in Fortune 100 companies. A trailblazing sales exec in Silicon Valley, Eva has a track record of building large tech brands such as Compaq and HP in new markets and funding startup and humanitarian initiatives.

A space philanthropist and 2nd generation Aerospace, Eva is the creator of the Lady Rocket foundation and created Copernic Space to enable access to space for all and the creation of new solutions for Earth.

Key Team Members

Our team and advisors represent 3 generations of activity in the space economy, including decades of combined leadership experience in blockchain, Fortune 500's, and aerospace.
